LeetCode

SUMMARY

MCA graduate from Banaras Hindu University specializing in Artificial Intelligence, Backend Development, and Machine Learning. Hands-on experience deploying Vision-Language Models (Qwen2.5-VL) using FastAPI for intelligent document extraction and multimodal inference. Proficient in Java, Python, ASP.NET Core, REST APIs, and scalable backend systems, with strong problem-solving skills demonstrated through 300+ DSA problems. Passionate about building scalable AI-Powered Backend applications and LLM-powered solutions.

SKILLS

- **Programming Languages :** Java, Python, C#
- **Artificial Intelligence:** Machine Learning, Deep Learning, LLMs, Vision-Language Models, Feature Engineering, Model Evaluation, Computer Vision
- **Libraries:** Scikit-learn, NumPy, Pandas, PyTorch, Matplotlib, TensorFlow, Seaborn
- **Backend:** ASP.NET Core Web API, FastAPI, REST APIs, Django, JWT Authentication
- **Frontend:** HTML, CSS, JavaScript, React.js
- **Database :** MySQL
- **Tools :** Git, GitHub, VS Code, Visual Studio, Jupyter Notebook, Hugging Face Spaces, Postman
- **Core CS :** Data Structures and Algorithms, DBMS, Computer Networks, Operating System

WORK EXPERIENCE

Credent Infotech (Intern)

March 2026 - Present

Intelligent Customs Document Extraction (Python, FastAPI, Qwen2.5-VL, Hugging Face)

- Deployed a pre-trained Qwen2.5-VL model for customs PDF extraction using FastAPI, Hugging Face, and vision-language prompting for customs/import document processing.
- Designed a single-pass PDF extraction workflow with dynamic prompt input, JSON-structured output, and part-wise schema handling for complex multi-section documents.
- Improved extraction accuracy to 87% through prompt optimization, temperature-controlled inference, high-resolution PDF rendering (220 DPI), and field-level evaluation.

Attendance Management Platform (ASP.NET Core Web API, Entity Framework Core, JWT)

- Developing enterprise-grade backend services using ASP.NET Core Web API following Repository Pattern and layered architecture.
- Designing and maintaining REST APIs for employee, asset allocation, authentication, and reporting modules.
- Implementing secure authentication and authorization using JWT and integrating Microsoft Single Sign-On (Azure AD).
- Collaborating using Git and Azure DevOps in a multi-developer environment with feature branches, pull requests, and code reviews.

EDUCATION

Banaras Hindu University, Varanasi

August 2024 - May 2026

Master of Computer Applications (MCA)

CGPA: 7.68

St. Columba's College, Vinoba Bhave University

September 2020 - August 2023

Bachelor of Science in Mathematics

CGPA: 7.93

PROJECTS

Arrhythmia Detection Using CNN MIT-BIH Dataset

GitHub

November/2025

- Designed a Convolutional Neural Network (CNN) to classify ECG signals.
- Preprocessed and denoised time-series data using NumPy & Pandas.
- Trained and validated the model using TensorFlow/Keras.

ACHIEVEMENTS & EXTRACURRICULAR ACTIVITIES

DSA Problem Solving

- Solved 300+ Data Structures and Algorithms problems across LeetCode, HackerRank, Coding Ninjas, GeeksforGeeks.
